Report GSA-COA-CUST-LA-2218BPCTB-20261109-5 · issued Nov 18, 2026

LA Peptides

PRODUCT	ORDER	SAMPLE
BPC-157 / TB-500 blend	GSA-2026-000080	LA2218-BPCTB
LABEL	**LOT**	**ISSUED**
BPC-157 / TB-500 blend	2218	Nov 18, 2026

THE SAMPLE AS RECEIVED

IDENTITY

BPC-157, TB-500

both declared peptides found

PURITY

95.6 %

HPLC-UV, 214 nm, 3 injections

ENDOTOXINS

< 0.050 EU/mL

Pass; spike recovery 59 %

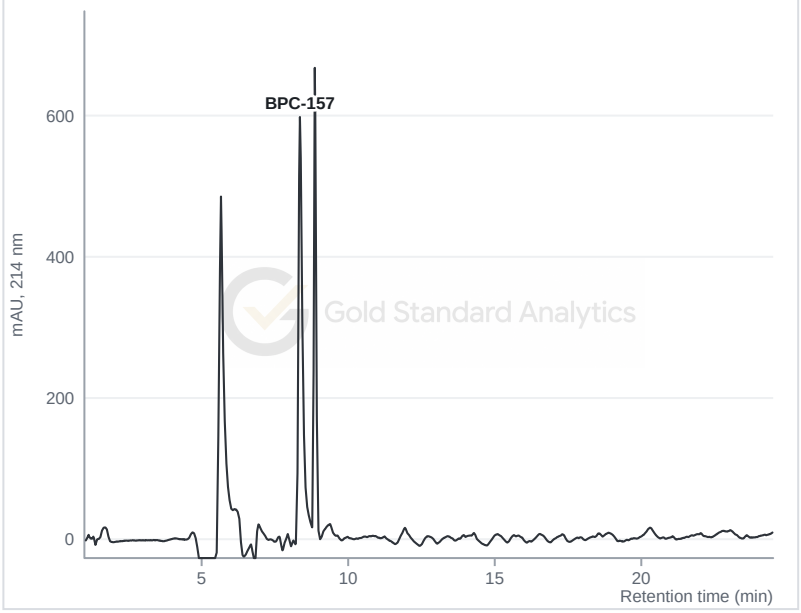

STERILITY

No growth

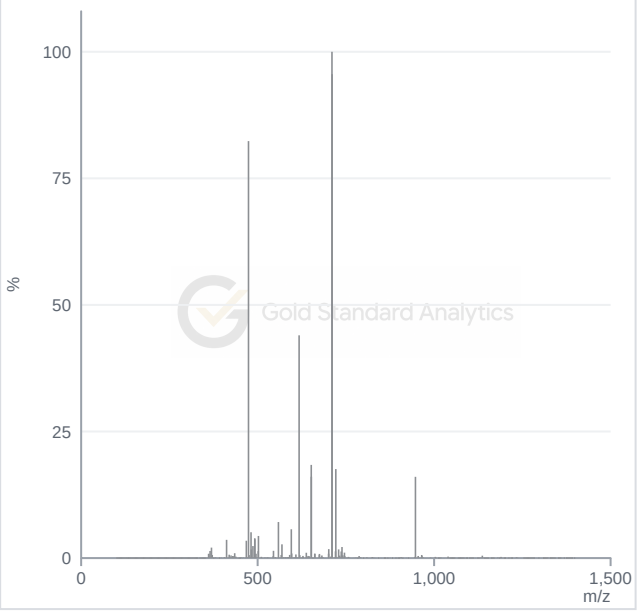

Pass; both canisters, 14 days

Heavy metals USP <232>, ICP-MS: Pb, Cd, Hg, As, Co, V, Ni — **Pass**

HPLC CHROMATOGRAM UV, 214 nm

MASS SPECTRUM main peak (8.36 min)

The sample

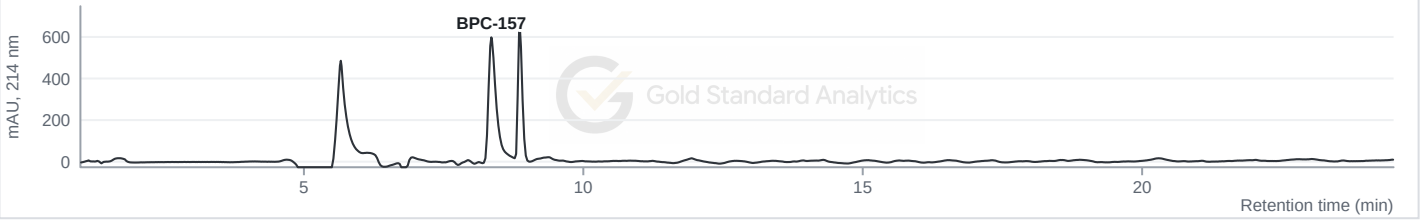

Lot 2218 · LA Peptides

Customer	**LA Peptides**	Lot	**2218**
Order	**GSA-2026-000080**	Prepared	**Vial contents dissolved in 2 mL water with 0.1 % formic acid, then diluted 1 in 10, 6 Nov 2026**
Sample	**LA2218-BPCTB**	Tested	**09 Nov 2026**
Label	**BPC-157 / TB-500 blend**	Tests	**Identity, Purity, Impurity breakdown, Bacterial endotoxins, Sterility, Elemental impurities**

Graphs

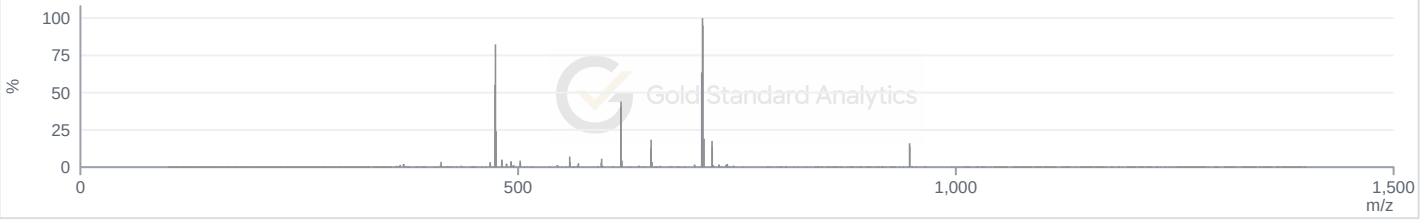

HPLC CHROMATOGRAM

HPLC chromatogram (UV, 214 nm) · mAU, 214 nm against Retention time (min)

MASS SPECTRUM

Mass spectrum of the main peak (8.36 min) · Counts against m/z

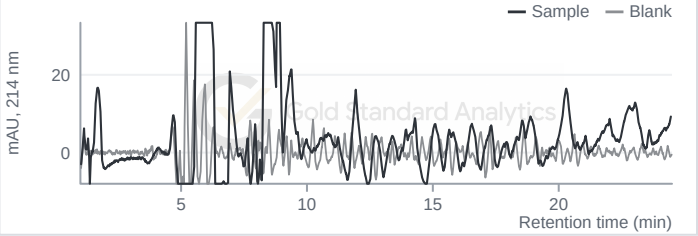

Results

Identity	**Both declared peptides found** by their molecular mass: BPC-157 (m/z 710.4 [M+2H]2+ and 474.0 [M+3H]3+; mass about 1,419) and TB-500 as full-length thymosin beta-4 (m/z 993.7, 828.2 and 710.1, its 5+, 6+ and 7+ ions; mass about 4,963).
Purity	**95.6 %** by HPLC with UV detection at 214 nm (the two declared peptides as a share of the UV peak area of the peptide group they come off in); mean of three injections of the same solution (96.6, 97.0 and 93.2 %). One impurity is counted, listed below. Several small later peaks stay below the baseline limit and carry no BPC-157 or TB-500 mass, so they are not counted. The large peak at about 5.5 min comes from the mobile phase, not the sample: it also appears when nothing is injected, and it is not counted.
Composition	Share of the UV peak area at 214 nm: BPC-157 58 %, TB-500 38 %. UV area is not the same as weight: each peptide absorbs UV light differently.
Bacterial endotoxins	**< 0.050 EU/mL; spike recovery 59%** . Pass.
Sterility	**No growth in either canister after 14 days** . Pass.
Elemental impurities (USP <232>)	**Pb < 0.5 µg/g; Cd < 0.2 µg/g; Hg < 0.3 µg/g; As < 1.5 µg/g; Co < 0.5 µg/g; V < 1 µg/g; Ni < 2 µg/g (Agilent ICP-MS)** . Pass.

Zoomed views

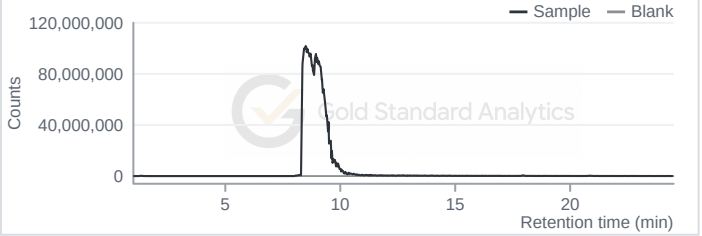

HPLC, SMALL PEAKS

Zoomed in on the small peaks (5 % of the main peak) · mAU, 214 nm against Retention time (min)

ION TRACE

Ion trace, m/z 710.4 (BPC-157 [M+2H]2+): sample vs blank · Counts against Retention time (min)

Impurities

The peak counted besides the declared peptides:

PEAK (MIN)	AMOUNT	WHAT IT IS
9.0-9.8	4.4 %	TB-500 with an added mass of 42 (about 5,005): an extra acetyl group, a synthesis by-product. It elutes just after TB-500, so this includes the end of the TB-500 peak.

> Amounts are each peak's share of the UV peak area at 214 nm (mean of three injections). Also found by mass, but too small to measure by UV: shorter pieces of BPC-157 (masses about 1,079 and 1,320), BPC-157 that has lost one water molecule (about 1,401), BPC-157 with an added mass of 42 (about 1,461) and two BPC-157 molecules joined together (about 2,821).

How it was tested

Liquid chromatography with UV and mass-spectrometry detection: Agilent 1290 Infinity II LC with a 6490 triple-quadrupole mass spectrometer. Column Altura Peptide Plus, 2.1 x 150 mm, 2.7 µm, 45 °C; water and acetonitrile, each with 0.1 % formic acid. Purity: UV peak area at 214 nm after subtracting a blank run of the same sequence. Identity: molecular mass from the mass spectrum. Bacterial endotoxins: endotoxin reader, 0.050 EU/mL limit; result reported as printed by the reader, with spike recovery. Sterility: membrane filtration (canisters), 14-day incubation. Elemental impurities (USP <232>): Agilent ICP-MS; Pb, Cd, Hg, As, Co, V, Ni.

Notes

Results apply only to the sample as received and tested. The test solution was injected about 3 days after it was prepared (kept in the cooled autosampler); peptides can change slowly in solution, so a freshly prepared solution may read slightly higher. The charts show the 10 Nov injection.
