Report GSA-COA-000092-09206-20261117 · issued Nov 23, 2026

Vitalis Peptides

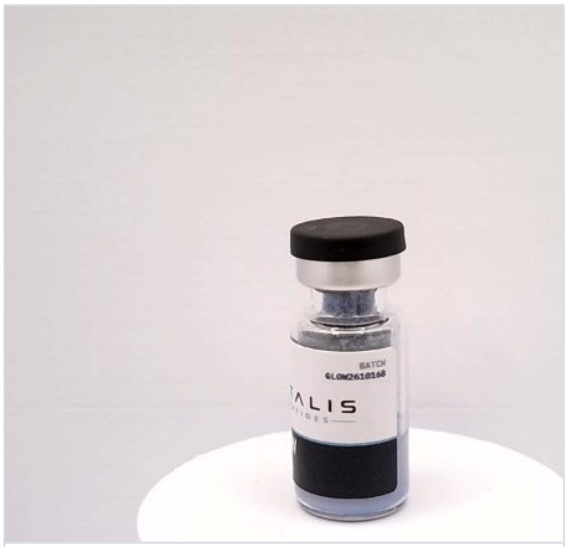

PRODUCT
GLOW blend (GHK-Cu, BPC-157, TB-500)

ORDER
GSA-2026-000092

SAMPLE
092-06

LOT
GLOW261016B

ISSUED
Nov 23, 2026

THE SAMPLE AS RECEIVED

IDENTITY ✓

GHK-Cu, BPC-157, TB-500

3 declared components found

PURITY ✓

99.78 %

HPLC-UV, 214 nm

GHK-CU ✓

83.07 %

found by mass; share of the peptide UV area

BPC-157 ✓

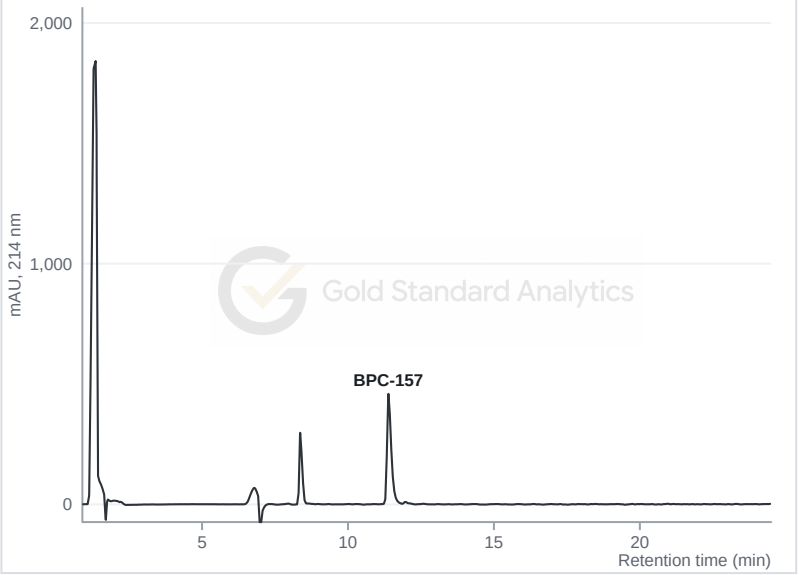

11.73 %

found by mass; share of the peptide UV area

✓ **TB-500** found by mass; share of the peptide UV area — **5.20 %**

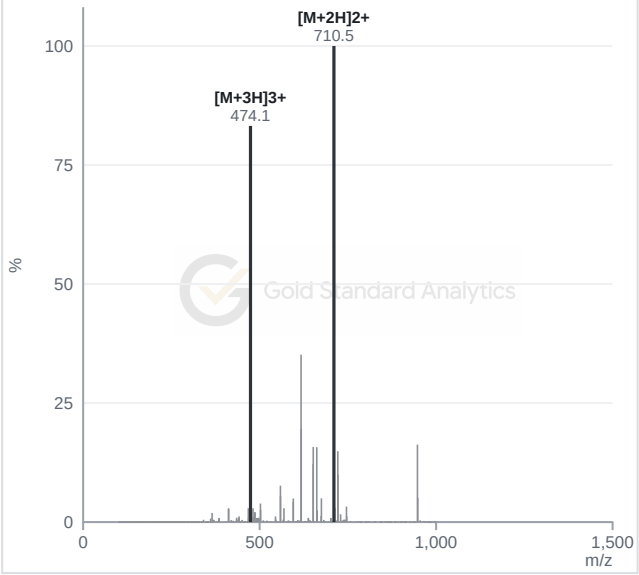

HPLC CHROMATOGRAM

UV, 214 nm

MASS SPECTRUM

main peak (11.39 min)

HPLC CHROMATOGRAM

HPLC chromatogram (UV, 214 nm) · mAU, 214 nm against Retention time (min)

MASS SPECTRUM

Mass spectrum of the main peak (11.39 min) · Counts against m/z

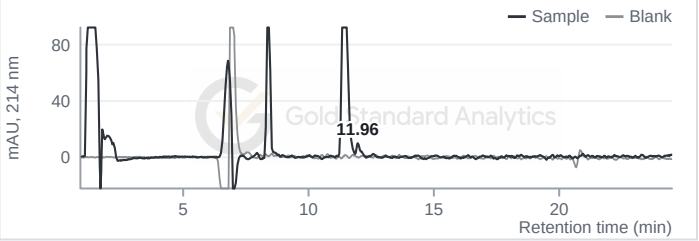

Results

Identity	**All declared components found** by their molecular mass: GHK-Cu (its peptide GHK, with the copper complex at m/z 402.1) at 1.37 min (m/z 341.1 and m/z 171.2; measured mass 340.2, expected 340.4); BPC-157 at 11.39 min (m/z 710.5 and m/z 474.1; measured mass 1,419.1, expected 1,419.5); TB-500 as the fragment Ac-LKKTETQ (thymosin beta-4, residues 17-23) at 8.37 min (m/z 889.6 and m/z 445.4; measured mass 888.7, expected 888.5).
Purity	**99.78 %** by HPLC with UV detection at 214 nm (share of the total peak area), counting all declared components together. 1 impurity was found and is listed below. Unexplained peaks count above about 2.9 % of the smallest declared component's peak height; forms of the peptides identified by mass count down to about 1.8 % of it. GHK-Cu was too strong to measure in this 10 µL injection, so its peak area is taken from a 0.6 µL injection of the same solution, scaled by the injection volumes; peaks within 0.3 min of it could not be judged. The vial also contains a sugar alcohol such as mannitol (a common vial filler), seen by mass at the start of the run; it is not a peptide and is not counted. The large peak at about 6.8 min comes from the instrument, not the sample: it also appears in blank runs.
Composition	Share of the declared-peptide UV area at 214 nm: GHK-Cu 83.07 %, BPC-157 11.73 %, TB-500 5.20 %. These are shares of UV signal, not of weight: the peptides absorb UV differently, so the split by weight cannot be read from them.

ION TRACE

Ion trace, m/z 710.4 (BPC-157 [M+2H]2+): sample vs blank · Counts against Retention time (min)

Impurities

Every peak other than the declared peptides that was counted:

PEAK (MIN)	AMOUNT	WHAT IT IS
11.96	0.22 %	BPC-157 that has lost one water molecule (mass about 1,402 instead of 1,420). A common by-product of peptide synthesis or storage.

> Amounts are each peak's share of the total UV peak area at 214 nm.

How it was tested

Liquid chromatography with UV and mass-spectrometry detection: Agilent 1290 Infinity II LC with a 6490 triple-quadrupole mass spectrometer. Column Polaris C18-A, 2.0 x 150 mm, 45 °C; water and acetonitrile, each with 0.1 % formic acid. Purity: UV peak area at 214 nm, after subtracting a blank run in the same sequence. Identity: molecular mass from the mass spectrum. 10 µL injected; autosampler at 12 °C.

Notes

Results apply only to the sample as received and tested.
