Report GSA-COA-CUST-LA-SELANK-20261103-5 · issued Nov 18, 2026

LA Peptides

PRODUCT
Selank nasal spray

ORDER
Custom sample

SAMPLE
LA-SELANK-20261103

ISSUED
Nov 18, 2026

THE SAMPLE AS RECEIVED

IDENTITY
Selank
confirmed by mass

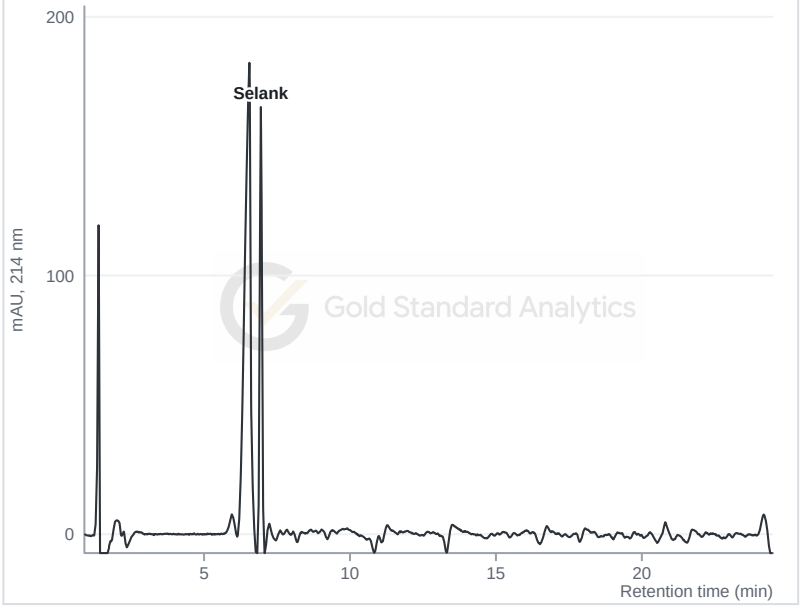

PURITY
99.3 %
HPLC-UV, 214 nm

ENDOTOXINS
< 0.050 EU/mL
Pass; spike recovery 109 %

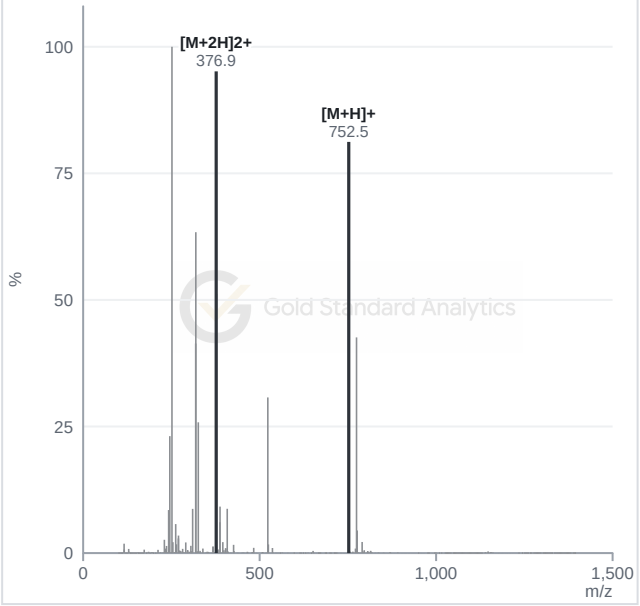

STERILITY
No growth
Pass; both canisters, 14 days

Heavy metals USP <232>, ICP-MS: Pb, Cd, Hg, As, Co, V, Ni — **Pass**

HPLC CHROMATOGRAM — UV, 214 nm

MASS SPECTRUM — main peak (6.94 min)

Results are not covered by ISO/IEC 17025 accreditation. Results relate only to the sample as received and tested.

The sample

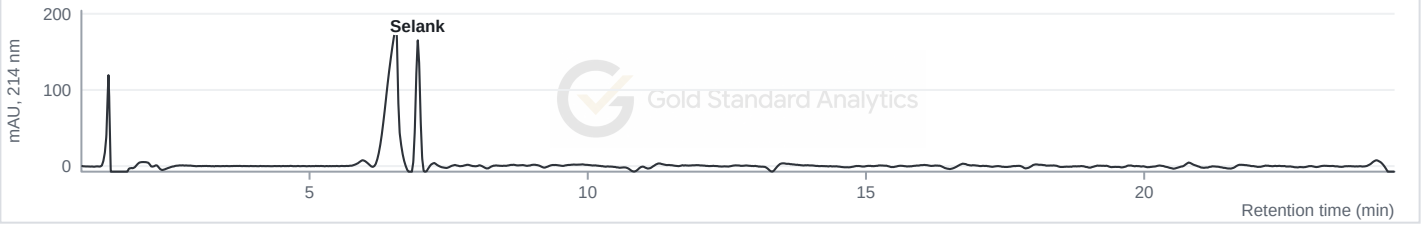

Custom sample · LA Peptides

Customer	**LA Peptides**	Prepared	**Spray diluted 1 in 7 with water containing 0.1 % formic acid, 3 Nov 2026**
Order	**Custom sample**	Tested	**03 Nov 2026**
Sample	**LA-SELANK-20261103**	Tests	**Identity, Purity, Impurity breakdown, Bacterial endotoxins, Sterility, Elemental impurities**
Label	**Selank nasal spray, 10 mg per bottle**		

Graphs

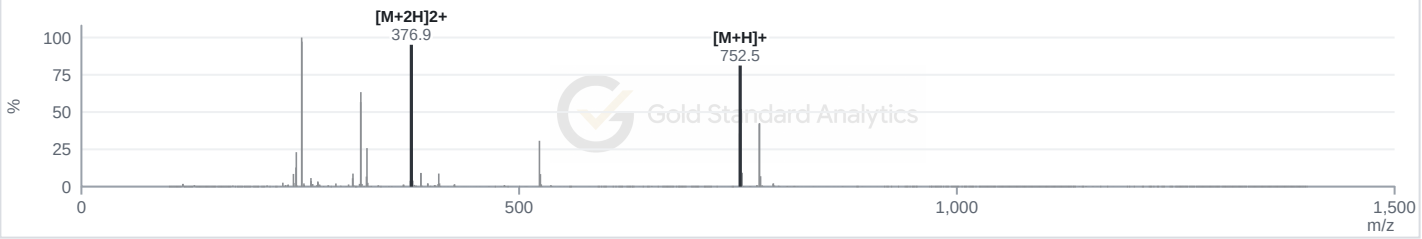

HPLC CHROMATOGRAM

HPLC chromatogram (UV, 214 nm) · mAU, 214 nm against Retention time (min)

MASS SPECTRUM

Mass spectrum of the main peak (6.94 min) · Counts against m/z

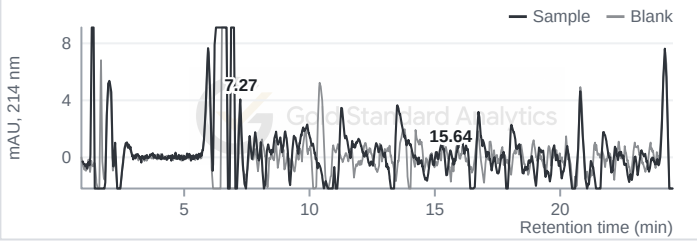

Results

Identity	**Consistent with Selank.** The main peak at 6.94 min carries its ions at m/z 752.5 ([M+H]+) and 376.9 ([M+2H]2+); molecular mass 751.6 (expected 751.9).
Purity	**99.3 %** by HPLC with UV detection at 214 nm (share of the peptide-related UV peak area). 2 forms of Selank identified by mass are listed below. Selank comes off the column next to a peak from the mobile phase (it appears when only blank solvent is run), which is not counted; a small form of Selank under that peak is counted, but its amount is approximate. The early peak at about 1.4 min is salt from the spray liquid (its mass spectrum shows sodium formate clusters and no peptide) and is not counted.
Bacterial endotoxins	**< 0.050 EU/mL; spike recovery 109%** . Pass.
Sterility	**No growth in either canister after 14 days** . Pass.
Elemental impurities (USP <232>)	**Pb < 0.5 µg/g; Cd < 0.2 µg/g; Hg < 0.3 µg/g; As < 0.2 µg/g; Co < 0.3 µg/g; V < 0.1 µg/g; Ni < 0.5 µg/g (Agilent ICP-MS)** . Pass.

HPLC, SMALL PEAKS

Zoomed in on the small peaks (5 % of the main peak) · mAU, 214 nm against Retention time (min)

ION TRACE

Ion trace, m/z 376.7 ([M+2H]2+): sample vs blank · Counts against Retention time (min)

Impurities

Every peak counted besides the main peptide:

PEAK (MIN)	AMOUNT	WHAT IT IS
7.27	0.19 %	A separate form of Selank with the same mass (an isomer); its exact structure is unknown.
15.64	0.55 %	Selank with two extra oxygen atoms (mass about 784 instead of 752). This fits oxidation, a common change during storage.

> Amounts are each peak's share of the peptide-related UV peak area at 214 nm.

How it was tested

Liquid chromatography with UV and mass-spectrometry detection: Agilent 1290 Infinity II LC with a 6490 triple-quadrupole mass spectrometer. Column Polaris C18-A, 2.0 x 150 mm, 45 °C; water and acetonitrile, each with 0.1 % formic acid. Purity: UV peak area at 214 nm after subtracting blank runs of the same sequence. Identity: molecular mass from the mass spectrum. Bacterial endotoxins: endotoxin reader, 0.050 EU/mL limit; result reported as printed by the reader, with spike recovery. Sterility: membrane filtration (canisters), 14-day incubation. Elemental impurities (USP <232>): Agilent ICP-MS; Pb, Cd, Hg, As, Co, V, Ni.

Notes

Results apply only to the sample as received and tested.

Release

This report is signed electronically at release. The signature is printed on page 1, and the release record, added as the last page, gives the date and the verification code.
