LA Peptides

PRODUCT
Adamax nasal spray (second bottle)

ORDER
Custom sample

SAMPLE
LA-ADAMAX2-20261111

LABEL
Adamax nasal spray, second bottle

ISSUED
Nov 18, 2026

THE SAMPLE AS RECEIVED

IDENTITY

Adamax peptide

acid form, by mass

PURITY

96.8 %

HPLC-UV, 214 nm, 2 injections

ENDOTOXINS

< 0.050 EU/mL

Pass; spike recovery 69 %

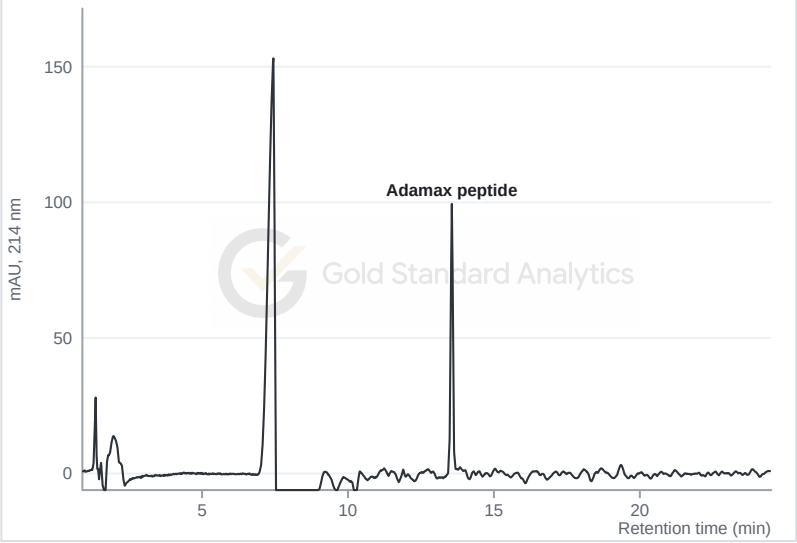

STERILITY

No growth

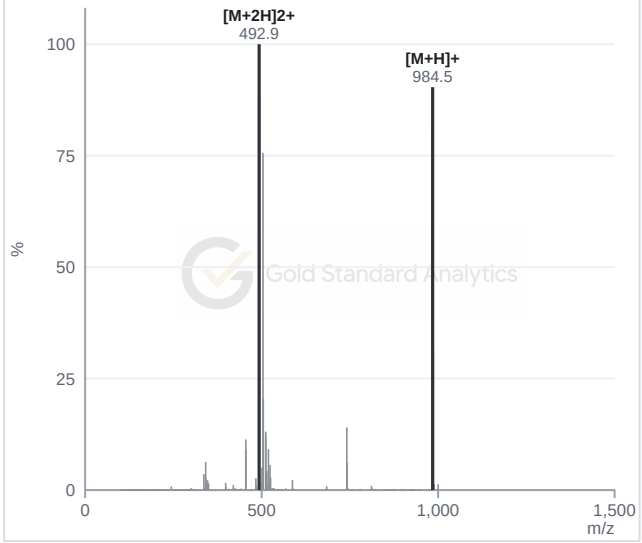

Pass; both canisters, 14 days

Heavy metals USP <232>, ICP-MS: Pb, Cd, Hg, As, Co, V, Ni — **Pass**

HPLC CHROMATOGRAM UV, 214 nm

MASS SPECTRUM main peak (13.56 min)

RELEASED BY

MASS SPECTRUM

Mass spectrum of the main peak (13.56 min) · Counts against m/z

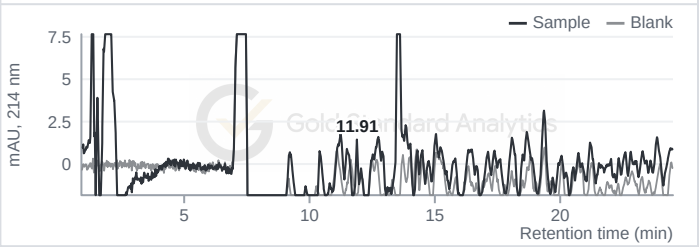

Results

Identity	**Adamax peptide found, as its acid form.** The main peak at 13.56 min carries ions at m/z 984.5 ([M+H]+) and 492.9 ([M+2H]2+), a molecular mass of about 983.6. This matches the Adamax peptide sequence Ac-Met-Glu-His-Phe-Pro-Gly-Pro-Ala-Gly with a free acid at its end (expected 983.4), not its amide (982.4). The adamantane-containing compound also described as Adamax (mass 1,031.5) was not found. The same peptide as in the first Adamax bottle tested on 3 Nov 2026.
Purity	**96.8 %** by HPLC with UV detection at 214 nm (share of the peptide-related UV peak area; mean of two injections of the same solution, 97.4 % and 96.2 %). The only form of the peptide found by mass is its oxidised form, listed below. The large peak at about 7 to 7.5 min comes from the instrument, not the sample: the same peak appears when only blank solvent is run. The early peak at about 1.3 min is salt from the spray liquid (its mass spectrum shows sodium formate clusters and no peptide). Neither is counted.
Bacterial endotoxins	**< 0.050 EU/mL; spike recovery 69%** . Pass.
Sterility	**No growth in either canister after 14 days** . Pass.
Elemental impurities (USP <232>)	**Pb < 0.5 µg/g; Cd < 0.2 µg/g; Hg < 0.3 µg/g; As < 0.2 µg/g; Co < 0.3 µg/g; V < 0.1 µg/g; Ni < 0.5 µg/g (Agilent ICP-MS)** . Pass.

HPLC, SMALL PEAKS

Zoomed in on the small peaks (5 % of the main peak) · mAU, 214 nm against Retention time (min)

ION TRACE

Ion trace, m/z 492.6 (Adamax peptide [M+2H]2+): sample vs blank · Counts against Retention time (min)

Impurities

Every peak counted besides the main peptide:

PEAK (MIN)	AMOUNT	WHAT IT IS
11.91	3.2 %	The Adamax peptide with one extra oxygen atom (mass about 999 instead of 983). This fits oxidation, a common change during storage.

> Amounts are each peak's share of the peptide-related UV peak area at 214 nm.

How it was tested

Liquid chromatography with UV and mass-spectrometry detection: Agilent 1290 Infinity II LC with a 6490 triple-quadrupole mass spectrometer. Column Polaris C18-A, 2.0 x 150 mm, 45 °C; water and acetonitrile, each with 0.1 % formic acid. Purity: UV peak area at 214 nm after subtracting blank runs of the same sequence. Identity: molecular mass from the mass spectrum. Bacterial endotoxins: endotoxin reader, 0.050 EU/mL limit; result reported as printed by the reader, with spike recovery. Sterility: membrane filtration (canisters), 14-day incubation. Elemental impurities (USP <232>): Agilent ICP-MS; Pb, Cd, Hg, As, Co, V, Ni.

Notes

Results apply only to the sample as received and tested.
