Results

Identity	**DSIP found; Pinealon and Epitalon were not found.** The main peak at 9.41 min carries DSIP's ions at m/z 849.5 ([M+H]+) and 425.2 ([M+2H]2+); molecular mass 848.4 (expected 848.8). No peak carried the ions of Pinealon (expected m/z 419.2) or Epitalon (expected m/z 391.2). Both are small, early-eluting peptides; in this spray they would come off with the spray liquid's own early peaks, so a small amount of either cannot be ruled out.
Purity	**99.3 %** by HPLC with UV detection at 214 nm, for the peptide found (DSIP), as a share of the peptide-related UV peak area. 1 form of DSIP identified by mass is listed below. The large peak at about 6.5 to 7.5 min comes from the instrument, not the sample: the same peak appears when only blank solvent is run. The early peak at about 1.4 min is salt from the spray liquid (its mass spectrum shows sodium formate clusters and no peptide). Neither is counted.
Bacterial endotoxins	**< 0.050 EU/mL; spike recovery 84%** . Pass.
Sterility	**No growth in either canister after 14 days** . Pass.
Elemental impurities (USP <232>)	**Pb < 0.5 µg/g; Cd < 0.2 µg/g; Hg < 0.3 µg/g; As < 0.2 µg/g; Co < 0.3 µg/g; V < 0.1 µg/g; Ni < 0.5 µg/g (Agilent ICP-MS)** . Pass.

Impurities

Every peak counted besides the main peptide:

PEAK (MIN)	AMOUNT	WHAT IT IS
9.82	0.67 %	DSIP that has lost one water molecule (mass about 831 instead of 849). A common by-product of peptide synthesis or storage.

> Amounts are each peak's share of the peptide-related UV peak area at 214 nm.

How it was tested

Liquid chromatography with UV and mass-spectrometry detection: Agilent 1290 Infinity II LC with a 6490 triple-quadrupole mass spectrometer. Column Polaris C18-A, 2.0 x 150 mm, 45 °C; water and acetonitrile, each with 0.1 % formic acid. Purity: UV peak area at 214 nm after subtracting blank runs of the same sequence. Identity: molecular mass from the mass spectrum. Bacterial endotoxins: endotoxin reader, 0.050 EU/mL limit; result reported as printed by the reader, with spike recovery. Sterility: membrane filtration (canisters), 14-day incubation. Elemental impurities (USP <232>): Agilent ICP-MS; Pb, Cd, Hg, As, Co, V, Ni.
