Results

Identity	**Consistent with tirzepatide.** The main peak at 9.66 min carries tirzepatide's 4+ and 5+ ions (m/z 1204.3 and 963.6; molecular mass 4,813.1, expected 4,813.5) and elutes within 0.2 % of a tirzepatide reference standard run in the same sequence (9.68 min).
Purity	**100 %** by HPLC with UV detection at 214 nm, in both of two injections of the same solution: no other peak was found above the reporting limit (about 0.3 % of the tirzepatide peak height).
Fentanyl screen	**Not detected.** The capsule solution was screened by LC-MS/MS (multiple-reaction monitoring, two ion transitions each) for fentanyl and 15 related compounds: norfentanyl, 4-ANPP, acetylfentanyl, acrylfentanyl, butyrylfentanyl, cyclopropylfentanyl, furanylfentanyl, methoxyacetylfentanyl, para-fluorofentanyl, ocfentanil, carfentanil, sufentanil, alfentanil, remifentanil and valerylfentanyl. This is a screen: no detection limit is stated.
Bacterial endotoxins	**< 0.050 EU/mL; spike recovery 69%** . Pass.
Sterility	**No growth in either canister after 14 days** . Pass.
Elemental impurities (USP <232>)	**Pb < 0.5 µg/g; Cd < 0.2 µg/g; Hg < 0.3 µg/g; As < 1.5 µg/g; Co < 5 µg/g; V < 10 µg/g; Ni < 20 µg/g (Agilent ICP-MS)** . Pass.

Impurities

Every UV peak above the reporting limit was tirzepatide.

Amounts are each peak's share of the total UV peak area at 214 nm.

How it was tested

Liquid chromatography with UV and mass-spectrometry detection: Agilent 1290 Infinity II LC with a 6490 triple-quadrupole mass spectrometer. Column Polaris C18-A, 2.0 x 150 mm, 55 °C; water and acetonitrile, each with 0.1 % formic acid. Purity: UV peak area at 214 nm, after subtracting a blank run in the same sequence. Identity: molecular mass from the mass spectrum, and retention time against a tirzepatide reference standard run in the same sequence. Fentanyl screen: a separate injection with LC-MS/MS in multiple-reaction-monitoring mode. In the zoomed view, the blank line is the difference between two blank runs with the slow baseline drift removed. Bacterial endotoxins: endotoxin reader, 0.050 EU/mL limit; result reported as printed by the reader, with spike recovery. Sterility: membrane filtration (canisters), 14-day incubation. Elemental impurities (USP <232>): Agilent ICP-MS; Pb, Cd, Hg, As, Co, V, Ni.
