HPLC chromatogram (UV, 214 nm) · mAU, 214 nm against Retention time (min)

MASS SPECTRUM

Mass spectrum of the main peak (11.36 min) · Counts against m/z

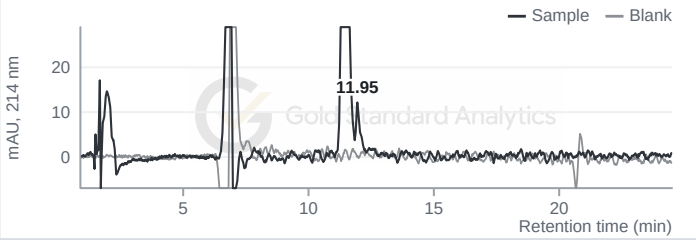

Results

Identity	**Consistent with BPC-157.** The main peak is BPC-157 at 11.36 min (m/z 710.5 and m/z 474.1; measured mass 1,419.1, expected 1,419.5).
Purity	**98.7 %** by HPLC with UV detection at 214 nm (share of the total peak area). 1 impurity was found and is listed below. Unexplained peaks count above about 1.5 % of the BPC-157 peak height; forms of the peptide identified by mass count down to about 0.9 % of it. The vial also contains a sugar alcohol such as mannitol (a common vial filler), seen by mass at the start of the run; it is not a peptide and is not counted in purity. The small peaks at about 1.7 to 2.0 min appear in every injection on this instrument, blank solvent included, and are not counted. The large peak at about 6.8 min comes from the instrument, not the sample: the same peak appears when only blank solvent is injected.

ION TRACE

Ion trace, m/z 710.4 (BPC-157 [M+2H]2+): sample vs blank · Counts against Retention time (min)

Impurities

Every peak other than the declared peptide that was counted:

PEAK (MIN)	AMOUNT	WHAT IT IS
11.95	1.4 %	BPC-157 that has lost one water molecule (mass about 1,402 instead of 1,420). A common by-product of peptide synthesis or storage.

Amounts are each peak's share of the total UV peak area at 214 nm.

How it was tested

Liquid chromatography with UV and mass-spectrometry detection: Agilent 1290 Infinity II LC with a 6490 triple-quadrupole mass spectrometer. Column Polaris C18-A, 2.0 x 150 mm, 45 °C; water and acetonitrile, each with 0.1 % formic acid. Purity: UV peak area at 214 nm, after subtracting a blank run in the same sequence. Identity: molecular mass from the mass spectrum. 2 µL injected; autosampler at 12 °C.

Notes

Results apply only to the sample as received and tested.

Release
